Office Action Summary	Application No.	Applicant(s)	
	09/382,442	REINBERG, ALAN R.	
	Examiner Richard A. Booth	Art Unit 2812	
<i>-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --</i>			
Period for Reply			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.			
<ul style="list-style-type: none"> - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). 			
Status			
1) <input checked="" type="checkbox"/> Responsive to communication(s) filed on <u>29 July 2002</u> .			
2a) <input type="checkbox"/> This action is FINAL. 2b) <input checked="" type="checkbox"/> This action is non-final.			
3) <input type="checkbox"/> Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.			
Disposition of Claims			
4) <input checked="" type="checkbox"/> Claim(s) <u>1-14,26-32 and 35-39</u> is/are pending in the application.			
4a) Of the above claim(s) _____ is/are withdrawn from consideration.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7-29-02 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14, 26-32, and 35-39 rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted prior art in view of Lisenker or Clark or Xiang et al., U.S. Patent 6,218,245.

The rejection is maintained as stated in the paper mailed 6-20-01. However, Admitted prior art, Lisenker, and Clark fail to provide a direct link between EPROMs and the use of deuterium, although the examiner believes that ample motivation is provided. Nonetheless, Xiang et al. discloses using deuterium annealing in order to improve the tunnel oxide of an EPROM (see col. 5-lines 46-67). In view of this disclosure, it would

have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate deuterium into the Eprom structure of the admitted prior art because the presence of deuterium allows for a high quality tunnel oxide.

Response to Arguments

Applicant's arguments filed 7-29-02 have been fully considered but they are not persuasive. Applicant argues none of the references teach using a deuterium treatment in order to improve the programming and erasing of the device. However, the examiner believes that ample motivation has been provided to use deuterium in EPROMs as pointed out by the problems mentioned in applicant's specification. Futhermore, an EPROM is a MOS based device because it has a source, drain, and channel. Therefore, many problems in typical MOS transistors would also be expected to be in EPROM devices. Notwithstanding applicant's arguments, the newly cited Xiang et al. reference clearly shows deuterium annealing in EPROM devices.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard A. Booth whose telephone number is 308-3446. The examiner can normally be reached on Monday-Thursday from 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Niebling can be reached on 308-3325. The fax phone numbers for

Application/Control Number: 09/382,442
Art Unit: 2812
